### **COVID-19** and the impact on the mobility system Some very first considerations & conclusions

Gert Blom Strategic Advisor Mobility May 2020

## COVID-19 Phase 1 – short term & lockdown (1) Crisis Management

#### Travel behaviour

- Reduction car trips, e.g. 47% less traffic Helmond (source: FvdBosch); Aarhus 58% decrease; Brussels 55-90% less car traffic!
- **▶ KIM: Netehrlands 55% less trips 68% reduction average distance**
- > Reduction public transport use between 70-90% reduction Europe
- Remote working

#### Modal shift

- > Shift towards individual modes of transport: private car & cycling.
- > Shift to cycling also experienced in car-oriented cities such as Brussels

### **Public Transport**

- > 70-90% less use Europe. 80% less use Australia (source: WSP); Brussels 90% less use; Barcelona 90-95%
- > Safety measures every where in place, e.g. no cash payment
- > Different strategies around Europe, e.g. Madrid & Brussels 50% less capacity, Hamburg offering even more buses (to ensure 1,5 m rule)

#### Private car use

## COVID-19 Phase 1 – short term & lockdown (2) Crisis Management

- Cycling & walking
  - **▶** Increase sales e-bikes example VanMoof 50% increase
- Shared Mobility/Maas/On-demand
  - > On-demand transport as possible alternative to fixed routes public transport, but services shared mobility dropped by 70% (McKinsey)
  - Financial crisis start-ups/ SME's shared mobility
  - MaaS pilots delayed / on hold (Brussels)
- Micromobility
  - Reduction people not willing to share vehicles
  - **→** Berg-insight: # shared e-scooters short term not increasing (2019 800.000)

## COVID-19 Phase 1 – short term & lockdown (3) Crisis Management

#### > Other

- > 31% reduction turnover Dutch mobility industry (source: survey RAI). Worldwide 2020 7,5 Mio less cars sold (McKinsey)
- > Increased inequality in mobility? Less mobility opportunities for disabled people, lower incomes etc?
- > Speed reduction and green times traffic controllers to offer more comfort cycling/walking (Brussels)

# COVID-19 Phase 2 – short/mid term (1) Recovery Management

#### Travel behaviour

- > Number of trips slowly increasing again in different countries
- Remote working still higher than before crisis
- > Leisure trips mainly in own country

#### Modal shift

> Probably shift from collective transport to individual modes of transport (Car, cycling, walking)

### Public Transport

- Capacity restrictions prebooking seats?
- ➤ Max 30 50% of normal capacity because of social distancing requirements (reference a.o. WSP Australia)
- > Time tables have to be adjusted for longer passenger loading times
- > Financial issue: low demand, but normal supply of service required
- ➤ Many countries obligation to wear masks (and gloves) in PT for example Belgium, Italy, Spain

#### Private car use

Increasing use of private car expected

## COVID-19 Phase 2 – short/mid term (2) Recovery Management

### Cycling & walking

- Increasing
- Many cities increasing space for cycling, e.g, Brussels, Paris (pop-up bike lanes!). Bogota 76 km additional cycle lanes added; Oakland (California) 10% of streets blocked off for pedestrians/cyclist

### Shared Mobility/Maas/On-demand

- > Incentive for accelerating transition from fixed routes Public Transport to mix of fixd routes public transport and ondemand to be more flexible and resistant
- > Need for upscaling, coordination and acceleration current MaaS pilots Netherlands (outcome Connekt Webinar)
- MaaS as possibility to flatten curve in peak demand public transport (more modes of transport)

## COVID-19 Phase 2 – short/mid term (3) Recovery Management

### Micromobility

- > Possible alternative to Public Transport if hygienic conditions met
- > City of Rome: stimulating use of micro-mobility

#### > Other

- > Speeding up infrastructural measures /maintenance (e.g. A1/A8/A12)
- ➢ Reducing speed (e.g. Brussels: more 20km/h zones, Milan 30 km zones)
- > Investments in ITS/Automated Driving/innovation temporarily going down
- **→ Widening opening hours to spread traffic, less rush hour pressure (City of Rome)**

# COVID-19 Phase 3 – mid term/long term short term (1) Towards a new mobility system?

#### Travel behaviour

- > Lock in remote working: 25% of remote workers expect to continue new way of working (survey KIM)
- Remote working becoming the norm ? (McKinsey)

#### Modal shift

- Possible long term shift to individual modes of transport car/cycling/walking?
- > 80% of Dutch people expect to return to pre-covid modes of transport (survey KIM)

### Public Transport

Social distance as new criterium for quality of public transport (tendering/procurement)

#### Private car use

- > Shift towards more private cars ? First studies China confirm this: congestion after lockdown even more than before crisis (source: China Urban Transport report)
- > Additional need for zero emissions cars

# COVID-19 Phase 3 – mid term/long term short term (2) Towards a new mobility system?

### Cycling & walking

- Lock in of COVID habits more cycling/walking?
- > Permanent increased space for bike lanes in many cities, e.g. Milan and other Italian cities

### Shared Mobility/Maas

- > COVID incentive for MaaS: offers better possibilities to cope with peak demand (more modes of transport)
- > Hygienic measures will become standard

### Micromobility

- > Alternative to public transport
- > Berg insight expects rapid growth shared e-scooters (after temporary short term decrease Phase 1)
- Hygienic measurements will become standard

# COVID-19 Phase 3 – mid term/long term short term (3) Towards a new mobility system?

### Automated Driving

- > Speeding-up deployment automated robots urban freight delivery (contactless delivery)
- > Shift towards more individual car use increase need for automated (and zero-emission) vehicles
- > After slowing down investments in phase 2, probably increased investments innovation & deployment

### Other

- > Space reallocated in cities for cycling/walking on permanent base (e.g. Italy)
- > Local shopping revival as well as further growth e-commerce
- ➤ LastMile delivery parcels more diverse and price increase (Prof. Roel Gevaers, Antwerp University)
- Passenger air transport will suffer severely
